

wBOX

Software Development Kit

The Mobile Point-of-Sale Solution designed for **Open Connectivity and Seamless Integration**

wBox SDK is specially designed for third party Point-of-Sale solution providers to interface with the innovative wireless POS technologies from WaveSoft. wBox “wireless in a box” is the next generation open handheld software extending critical mobile functionalities to existing restaurant and retail systems. wBox is the world’s first WinCE/PocketPC based POS system since 1998. The handheld software is a true native Windows Mobile application taking full advantage of today’s powerful PDA devices without the need for additional third party software licenses such as the Terminal Service. It is a self-contained offline capable system with superior reliability, security and scalability. Through the open XML interface, comprehensive SDK utilities, and sample codes, the wBox SDK offers effortless and seamless integration to the latest wBox system version 6 and above.

Partnering with Wireless

Introducing the revolutionary

Mobile System Builder

- Creates native Microsoft PocketPC, Windows Mobile and CE.NET Point-of-Sale solutions without a single line of code.
- Designs custom system layout and functions to suit different mobile Point-of-Sale applications.
- Offers true screen resolution and orientation independence for a wide selection of handheld computing devices.

■ Mobile System Builder is available with wBox SDK Premium edition
